

QUANTIFIABLE EDGES SUBSCRIBER LETTER

ASSESSING MARKET ACTION WITH INDICATORS AND HISTORY

April 14, 2008

Issue 39

Market Overview

Summary of Recent Active Studies (see <http://QuantifiableEdges.blogspot.com> for details)

April 14, 2008	Sharp Selloff in Consolidation	20 days	Bearish
April 10, 2008	Relatively High Put/Call	20 days	Bullish
April 8, 2008	Negative Reversal Bars	3-5 days	Bearish
April 4, 2008	Trend Over Volatility (TOV)	20 days	Bullish
April 1, 2008	3 Surge Days	2-6 weeks	Bullish
February 1, 2008	FTD's Short-Term Implications	long-term	Bearish
March 24, 2008	Nasdaq Leadership Bullish	1-10 weeks	Bullish
March 19, 2008	Bottom Explosion 2	1-20 days	Bullish
March 19, 2008	3.5% Up Cluster	10-20 days	Bullish
March 17, 2008	Consumer Sentiment Stretch	1-12 months	Bullish

Intermediate-term Outlook (2 weeks – 2 months) – neutral – updated 4/14/2008

On Friday April 11th the market took a bit of a dive. The catalyst for the selloff was GE's poor earnings announcement. In a healthier market environment the large gap down at the open would have been viewed by market participants as a buying opportunity and the market would have spent the day clawing back from its losses rather than extending them. By the end of the day Friday, the S&P 500 had lost over 2% and the Nasdaq 100 had lost nearly 3%. This action is concerning.

In [tonight's blog](#), I looked at large selloff's in the past that occurred in non-trending markets and were not breakdowns. For this test I used ADX to define trend and a violation of a 10-day closing low to determine a possible break of support. The results were quite negative over every exit point from 1-day to 4-weeks out. This is the first study with bearish intermediate-term implications I've produced for several weeks.

As I mentioned in my last intermediate-term outlook a few days ago we are also seeing some of the more bullish studies from a few weeks back begin to age and expire. The first one occurred last Thursday. This Thursday the 17th both of the bullish studies from March 19th will fall off the list as their influence wanes.

Another concern is the action in the Nasdaq this week, and especially Friday. As I mentioned above, GE was the catalyst, and the prime culprit for their earnings miss was the disruption in the financial markets. You would expect financials to take this news

poorly and sell off in sympathy. The Nasdaq, which had taken a leadership role over the NYSE Composite a few weeks ago, should have held up a bit better. GE is largely unrelated to technology. Yet it fell even harder than the broad market – nearly 3% versus the S&P 500's 2%. This has moved the weekly relative strength of the Nasdaq below the NYSE's. As I've discussed in the past, the general market has typically struggled to advance when the Nasdaq has failed to take leadership from the NYSE.

It will be important to monitor the market's ability to hold above recent support levels. As noted, it has failed to break down in any way so far. Friday did move the S&P 500 and Nasdaq below their 50-day moving averages. While these are lines that many analysts looked at to possibly provide support, I find it neither surprising nor concerning that they were broken. Moving averages many times will provide support or resistance based on their slope. A moving average which has a nice up-slope serves a decent chance of providing at least temporary support. When a moving average is flat, many times it will act more as a pendulum than a support/resistance level. The recent move up in the market served to flatten out the 50-day moving averages. It may cross back and forth above and below it several times before the direction is fully determined and the moving average will begin to act as a support/resistance level again.

The late March lows are more significant in my eyes. These were around 1313 for the S&P 500. If the market can remain above these then the series of higher lows remains in tact and the baby rally has a chance of growing up. If these are broken then the last line of defense is the mid-March lows around 1257. If they're broken then it's a bit late to begin to notice the failure.

For now there still are many positives to look at. Even outside of the March 19th explosion studies that will be falling off the board, there are several more that make the bullish case. These include Trend Over Volatility, the High Put/Call, the 3 Surge Days and sharp drop in Consumer Sentiment. There is no need to overreact to the negative inferences of the April 11th market action. It is simply the first intermediate-term caution flag we've seen in the last month. It should be respected and we'll need to keep a close watch on further action. For now, I am moving the overall bias to neutral. I will therefore be willing to take both longs and shorts equally.

Short-term Outlook (1-5 days) –neutral – updated 4/14/08

From a short-term trading perspective, the market is in a tenuous position without an apparent strong edge. It is selling off hard but not oversold, in the middle of a multi-week consolidation, and moving on light volume exhibiting little conviction. Based on tonight's study, I am less eager to take on long exposure just because we are pulling back. I'd prefer to wait it out a bit longer. Should support around 1313 look to be holding or we receive some other indication of a reversal then I'd be willing to take on long index exposure. For now I'd prefer to hold off.

Individual stocks and sectors are in a similar position – selling off but not oversold within a consolidation. This is leaving me without new triggers tonight. You'll note no

Catapult trades were triggered on Friday. Based on what I'm seeing in individual issues, it would take some pretty intense selling to get any sizable cluster to form. Therefore, I wouldn't count on a high CBI acting as a catalyst for a reversal any time soon.

One way I sometimes generate trade ideas when I find a market edge as I did tonight (downside bias based on blog study), is to look for individual issues with similar characteristics. In this case I looked for stocks with an ADX < 20 that closed down at least 3% today but failed to close at a 10-day low. Initial testing revealed no substantial advantage to entering these trades immediately based on some simple exit strategies I devised. I believe they are worth watching over the next few days to see if more opportune entry triggers avail themselves. I've therefore listed all qualifiers in the "Stocks on my Radar" section below.
