ASSESSING MARKET ACTION WITH INDICATORS AND HISTORY

August 25, 2023

Volume 16 Issue 163

## Market Overview

## Signals Overview

Aggregator	CBI Reading
Long	6

## Tonight's Research Points

- The big outside day down is suggesting a move up over the next few days.

## *Short-term Outlook*

### *The Bottom Line*

The Aggregator is back to bullish. A decent bounce has been hard to come by, but odds still favor one. Friday's action could be heavily influenced by Powell's comments.

**The Evidence**

Thursday started strong but the sellers came in soon after the open and did not relent all day. It rose 1.1%, the NASDAQ gained 1.6%, and the Russell 2000 climbed 1.0%. Breadth was strong with the NYSE Up Issues % coming in at 77% and the Up Volume % at 63%. NYSE total volume rose some from Tuesday's level.

The big reversal triggered a few interesting studies. I found the one below to be the most compelling. It simply looked at outside day reversals like Thursday that close down substantially and follow an up day. Last seen in the 3/23/23 letter, I have updated the results.

After closing up yesterday, SPX posts an outside day and closes down > 1% but above its 200ma. Buy on close. Sell X days later. \$100k/trade. 1995 - present.

The numbers point to a possible upside edge. Below is a profit curve using a 4-day holding strategy.

The move from lower left to upper right is impressive. I have added this study to the active list tonight.

Perhaps bigger than anything else on Friday will be Jay Powell’s speech from Jackson Hole. It is a big wildcard that could ignite a strong reaction in either direction. Or it could be shrugged off as “nothing new”. Therefore, I am more eager to evaluate market action after Friday plays out than I am right now.

I have updated [the Aggregator chart](#) below.

With tonight's evidence considered, the green Aggregator Line remained above zero. Positive readings mean net expectations are for upside over the next few days. Meanwhile the black Differential Line rose back above zero. The positive Differential Line reading means that SPX is oversold versus recent expectations. So expectations are positive and SPX is oversold. This is considered a bullish configuration. Bullish configurations are visible on the chart whenever both lines close above zero. Therefore, the Aggregator formation turned long at the close.

Based on the current active studies, expectations are slated to remain positive on Friday. This is unlikely to change. Meanwhile, the Differential Pivot will be 4414.53 on Friday. That is 0.9% above Thursday's close. So SPX will need to close up at least 0.9% on Friday in order to flip from oversold to overbought vs recent expectations.

So the Aggregator formation is now bullish. Bullish evidence and an oversold market point to an upside edge. I still have a small amount of SPY. I won't look to add to that position unless we see a strong move lower on Friday. A strong move lower would likely be an overreaction to Powell's speech, and could set the market up nicely for a quick bounce.

*Intermediate-term Outlook (2 weeks – 2 months) – updated 8/21– neutral*

### **Additional New Trade Ideas**

*A full listing of system triggers can be found at the [numbered systems page](#) each night. I will cherry pick some of my favorite setups from the S&P 100 and ETF lists along with occasional other trade ideas to track below.*

**ABBV – Buy 1/3 Catapult position @ \$146.63 LIMIT.** From the Catapult section above, this is the 1<sup>st</sup> of up to 3 possible lots of ABBV.

**SPY – Buy ¼ index position @ \$433.00 LIMIT ON CLOSE.** Based on the short-term outlook, I will look to take on more SPY exposure if it closes down strongly following Powell’s speech.
