Tonight's Research Points

- The NYSE Up Issue % closed > 65% while SPX closed down. Since 1999, that has always been followed by a bounce in the coming days.

Short-term Outlook

The Bottom Line

The Aggregator is neutral. Evidence is leaning higher but SPX is overbought. We need just a little more of a pullback to potentially setup a favorable long-side opportunity.

The Evidence

Tech and some large-caps struggled, but most individual stocks actually rose. SPX finished down 0.1%, the NASDAQ lost 0.8%, and the Russell 2000 rallied 1.0%. Breadth was positive as the NYSE Up Issues % closed at 73% and the NYSE Up Volume % posted a 71% reading. NYSE total volume declined some from Monday's level.

Breadth this strong on a days the SPX closes down is quite unusual. The study below looks at other times since 1999 that SPX closed lower (and above the 200ma) while the NYSE Up Issue % finished > 65%. The study is updated from the 8/30/24 letter.

NYSE Up Issues % closes > 65%. SPX closes down but > 200ma. Buy SPX on close. Sell X days later. \$100k/trade. 1999 - present.

17-1 three days out is quite impressive. Below is a look at the 3-day profit curve.

That is an incredibly steady rise. The last instance was the lone loser, but even that closed up 1% on Day 1, before experiencing selling over the next couple of days. These are impressive results, and I have added this study to the short-term active list.

I have updated [the Aggregator chart](#) below.

With tonight's evidence considered, the green Aggregator Line remained above zero. Positive readings mean net expectations are for upside over the next few days. Meanwhile the black Differential Line held below zero. The negative Differential Line reading means that SPX is overbought versus recent expectations. So expectations are positive but SPX is overbought. This is considered a neutral configuration. Neutral configurations are visible on the chart whenever both lines close on opposite sides of zero. Therefore, the Aggregator formation stayed flat at the close.

Based on the current active studies, expectations are set to remain positive on Wednesday. Of course this could change if compelling new bearish evidence emerges. Meanwhile, the Differential Pivot will be 6189.25. That is 0.14% below Tuesday's close. So SPX will need to close just 0.14% lower on Wednesday in order to flip from overbought to oversold versus recent expectations.

So the Aggregator is again neutral. We seem to be getting closer to a potential long-side setup, but it will take another down day on Wednesday. Nothing to do yet. I'm waiting to see how Wednesday plays out and if any new evidence emerges that would change (or confirm) things.

*Intermediate-term Outlook (2 weeks – 2 months) – updated 6/30 – **bullish***
