The Evidence

Wednesday the market partially bounced back from Tuesday's selloff. SPX rose 0.4%, the NASDAQ gained 0.65%, and the Russell 2000 rallied 1.5%. Breadth was strong as the NYSE Up Issues % closed at 69% and the NYSE Up Volume % posted a 66% reading. NYSE total volume rose some from Tuesday's level.

The partial bounce back saw SPX close near the middle of its 10-day range. It also closed near the middle of its 1-day intraday range. Mid-range is not often a great place to find compelling edges. So it is not a big surprise that nothing new and compelling triggered in the Quantifinder. Therefore, I am going to keep it brief tonight.

I have updated [the Aggregator chart](#) below.

With tonight's evidence considered, the green Aggregator Line remained above zero. Positive readings mean net expectations are for upside over the next few days. Meanwhile the black Differential Line held above zero. The positive Differential Line reading means that SPX is oversold versus recent expectations. So expectations are positive and SPX is oversold. This is considered a bullish configuration. Bullish configurations are visible on the chart whenever both lines close above zero. Therefore, the Aggregator formation stayed long at the close.

Based on the current list of active studies, expectations are set to remain positive on Thursday. This could change if compelling new bearish evidence emerges. Meanwhile, the Differential Pivot will be 6892.35. That is 1.4% above Wednesday's close. Therefore, SPX will need to close up over 1.4% on Thursday in order to flip from oversold to overbought versus recent expectations.

So the Aggregator is again bullish. I have a small index position active in the trade ideas section. I am not inclined to add to it just yet, since we did not see any new confirming evidence emerge tonight. But I will hold that position for the time being.

Intermediate-term Outlook (2 weeks – 2 months) – updated 11/3 – *bullish*
